

making PACS  
more efficient

# DICOMetrix

PACS Performance Monitoring Software

The **World's only Proactive**  
**DICOM image flow and network performance**  
monitoring solution.

**DICOMetrix** is a resource tool that enables PACS Administrators, Directors and IT personnel to actively monitor, historically track system performance, and alert radiology and PACS support staff about system slow-downs and outages.

- Real time monitoring and tracking of network flow measured in DICOM Images Per Second.
- User defined gauges for time intervals.
- Full screen mode and mini-mode viewing options.
- Low CPU usage and near zero temporal delays so there is no lag on delivery of images.
- Workstation, Modality and 5, 10 & 25 Channel DICOM Server versions available.

Invented by a **PACS administrator**, this early warning system proactively tracks **DICOM image flow and Network problems**, before they become patient care problems.
